Abstract not available for JP 7504517 (T)

Abstract of corresponding document: **WO 9318465 (A1)**

A method and apparatus is shown for managing a plurality of computer jukeboxes (13) at different locations from a central station. Each jukebox (13) includes processor means (121) for controlling the computer jukebox (13), storage and retrieval means (93) for data, display means (125) for selection menus, audio production means (127) for playing musical records, and a user interface (123) enabling patrons to communicate with the processor means. The central station (11) can be used to download musical recording data to each computer jukebox (13), and each computer jukebox (13) can upload usage data to the central station (11).
